I analyzed YouTube's homepage by breaking it into four main sections the Header, Sidebar, Main Video Grid, and Footer. This method makes it easier to understand the website's structure by dividing it into simple parts. Each section has a specific purpose, such as navigation, finding content, or interacting with videos, helping users browse the site smoothly.

To make the breakdown clearer, I looked at smaller elements within each section. The Header includes important tools like the YouTube logo, search bar, and profile icon for easy navigation. The Sidebar organizes categories like Home, Trending, and Subscriptions to help users find videos quickly. The Main Video Grid shows videos with thumbnails, titles, and view counts, while the Footer contains links for legal information and support. This approach helped me understand how YouTube's layout is designed for a better user experience and will be useful for planning future web designs.
